Education

Northeastern University

Master of Science in Information Systems

Related Courses: Application Engineering, Web Development, Database Design, Algorithms, Cloud Computing

September 2022 - December 2024

Boston, Massachusetts, USA

Amrita Vishwa Vidyapeetham

Bachelor of Technology in Computer Science & Engineering

Related Courses: Data Structures, Web Development, Cloud Computing, Big Data Systems, Machine Learning

July 2016 - July 2020

Coimbatore, India

Work Experience

WhoozCooking, Boston, Massachusetts | Software Engineer Intern

January 2024 - July 2024

- Drove **\$64,000** in annual savings by optimizing delivery logistics and mitigating bugs by integrating **DoorDash API** using **Java 8, Hibernate**
- Reduced production bugs by 25% by utilizing **Postman** for **end-to-end testing** and REST service mocking to validate REST API endpoints
- Achieved a 30% reduction in unauthorized access incidents by optimizing session management and payment processing through **OAuth 2.0, JWT tokens, and Spring JPA (Java 8)**, as validated by metrics monitored via **AWS CloudWatch**
- Pioneered an **end-to-end** transaction alert subscription flow with **Twilio** using **Core Java, Hibernate, and Spring Batch** for CRUD operations on alert templates; documented APIs with **Swagger UI**, deployed using **Docker**, achieving 100% message delivery
- Automated **ATDD** with CI/CD pipelines using **AWS CodePipeline, Terraform, and GitHub Actions**, cutting deployment time by 25% and enabling zero-downtime blue-green deployments and fulfilling the Sprint user requirements

Cisco Systems, Bangalore, India | Software Engineer II

August 2021 - April 2022

- Created and deployed microservices with REST APIs (**Java 8/J2EE, Spring Boot, MongoDB**) handling **800 API requests/minute** to monitor and analyze router triggers (failovers, latency spikes)
- Leveraged a real-time event processing pipeline using **Apache Kafka** and Spring Boot, efficiently handling 500K+ events/sec, reducing latency by 35%, and ensuring fault-tolerant, event-driven workflows
- Led the implementation of **Test-Driven Development (TDD)** for unit testing, REST service mocking using **JUnit, Mockito, Selenium**, achieving **90% code coverage**, enhancing code quality and reliability
- Collaborated with clients and test engineers to resolve UAT and production issues using SDLC tools (**Jira, CloudWatch, JBoss**), achieving a 98% resolution rate on agreed SLAs

Cisco Systems, Bangalore, India | Software Engineer

May 2020 - July 2021

- Engineered a financial analytics module with **Java 8 and Spring Boot** to handle high-frequency data processing, integrating it with a **React-based front-end module**, improving user engagement and data visualization by **35%**
- Implemented API endpoints with RESTful principles in **Java (Spring Boot)** and **Node.js (Express.js)**, reducing inter-service response time
- Designed **20+ React interfaces** with **Redux, Node.js, Express.js, Highcharts**, for real-time financial data visualization
- Automated CI/CD pipelines with **Jenkins and Git**, halving release cycle times and boosting build efficiency by **40%**

Cisco Systems, Bangalore, India | Software Engineer Intern

January 2020 - April 2020

- Orchestrated a network protocol analytical tool employing **Python, Flask, Scapy, MongoDB**, with cronjobs facilitating daily data exports to third-party applications; resulted in a **30% increase in response time** by completing tasks in under 10 minutes

Projects

Cloud Native Microservice based AWS Automation - [Link](#) | Cloud Computing, AWS

- A Scalable cloud-based user onboarding platform that automates user registration and verification
- Developed AWS infrastructure using Terraform (IaC) to provision VPC, S3, RDS, SNS optimizing cloud resource management
- Implemented GitHub CI/CD pipeline to streamline deployment by building custom AMI with Packer triggering instant refresh in ASG

Stock Order Management - [Link](#) | Java 8, Spring Boot 2, Kafka, GraphQL, RESTful APIs, PostgreSQL

- Architected a stock management system with **Alpha Vantage API** for real-time data integration, employing **software design patterns (MVC, SOLID principles, abstraction)**, **Java multithreading**. Utilized **Kafka** for fault-tolerant message queuing for better stock order execution
- Developed **GraphQL API** and **RESTful API** services for seamless stock order management and efficient data retrieval

Chat Application - [Link](#) | Java, Spring Boot, Kafka, H2, React.js, Node.js

- Pioneered real-time messaging with **Kafka, Axios**, ensuring fast and reliable API communication with minimal latency
- Incorporated **JWT** for application security and role-based access control, leveraging **H2** for efficient testing and seamless integration

Technical Skills

Languages

Java 8+, Python, Shell Scripting, JavaScript, TypeScript, HTML, CSS, SQL

Frameworks

React, Node.js, Express, Spring Boot, REST API, J2EE, SOAP, Kafka, gRPC

Technologies

AWS (Lambda, EC2, S3, RDS, Elasticsearch), Git, Maven, Gradle, Jenkins, Linux, Docker, Selenium, Jira
